IBM SELECTS LOGICLIBRARY TO MANAGE SOFTWARE ASSETS

Logidex Solution To Help IBM Software Group Manage Internal Software Assets

PITTSBURGH—December 13, 2004—LogicLibrary, the leading provider of software asset management tools, today announced that IBM Software Group has purchased an enterprise license of Logidex to help catalog and manage the reusability of its software assets.

IBM Software Group, which includes the IBM WebSphere, IBM Rational, IBM Lotus, IBM DB2 and IBM Tivoli brands, is the world's second-largest software company and provides open standards-based middleware to support and integrate customer business processes as they make the transformation to an on demand business. The componentization of these software products is a key IBM strategy designed to enable the company, its customers and Business Partners to be more responsive to changing market demands. As individual components are designed and developed, a management system helps provide more efficient access to and reuse of each asset as part of new solutions. IBM selected Logidex because of its rich overall features and integration with the change and configuration management capabilities of IBM Rational ClearCase and IBM Rational Application Developer.

“IBM selected LogicLibrary for a number of reasons: its rich set of features, its integration with IBM Rational ClearCase and IBM Rational Application Developer, its thorough understanding of IBM requirements and its dedication to customer satisfaction,” said Pat Gibney, Director, Software Group Componentization at IBM. “IBM always strives to make its software better and faster. We have been extremely successful in modularizing IBM offerings and producing reusable, open components that can be shared among other IBM offerings. Software componentization can save on development costs, allow for quicker time-to-market and can provide the ability to be more responsive to customer needs and marketplace requirements. LogicLibrary's Logidex will serve as IBM Software Group's management system for accessing and reusing software assets.”

The Logidex SDA Library provides an inventory of assets and their relationships to each other, including technical infrastructure overlays and business processes. Software assets can include Web services, legacy applications, components, XML schema, frameworks, patterns and other key building blocks for offering development. Logidex's technology represents complex, enterprise application environments in a graphical, intuitive way and can enable enterprises to efficiently manage and reuse IT assets throughout the complete application lifecycle.

“There is no better evidence of the value that LogicLibrary provides than to have IBM, the world’s leading provider of application development tools, incorporate Logidex into its internal asset management process,” said Greg Coticchia, CEO of LogicLibrary. “Logidex makes it possible for companies like IBM to take advantage of existing software development assets to create exciting new business opportunities. Using pre-built, reusable components and services delivers enormous business benefits, including reduced development costs, elimination of redundancies and the rapid creation of new offerings and composite applications.”

About LogicLibrary

LogicLibrary is a leading provider of software and services that make it possible for enterprises to manage and reuse software development assets (SDAs). The company's patent-pending technology provides a comprehensive and collaborative approach for creating, migrating and integrating enterprise applications for use in service-oriented architecture, Web services and other software development initiatives. Additionally, LogicLibrary’s BugScan provides powerful, easy-to-use application-scanning technology that helps architects and developers ensure the highest levels of security at the onset of the design and development process.

LogicLibrary has been positioned in the “Leader” quadrant in Gartner Inc.'s Magic Quadrant for Metadata Repositories, 2004 and maintains strategic partnerships with Microsoft, as a Premier member of the Visual Studio Industry Partner (VSIP) program, IBM, as an Advanced PartnerWorld Partner, and Serena. LogicLibrary has been recognized the past two years on the *SD Times* 100 list of leaders and innovators in the software development industry and has integration partnerships that include Microsoft, IBM/Rational, Eclipse and Borland. LogicLibrary is headquartered in Pittsburgh, with additional offices in Rochester, MN and Sunnyvale, CA. For more information, visit www.logiclibrary.com.
