LOGICLIBRARY HOLDS INAUGURAL CUSTOMER CARE PROGRAM

*Representatives from Leading Organizations Come Together in Discussion
on Software Development Asset Management*

PITTSBURGH—March 29, 2005—LogicLibrary®, the leading provider of software development asset management tools, today announced the completion of the company's first "Customer Care" session. Held on March 23, the premier virtual user group provided a forum for representatives from Global 2000 organizations to come together and learn more about software development asset (SDA) management and the role it plays in their software reuse and service-oriented architecture (SOA) governance initiatives.

Kicked off by a presentation from LogicLibrary CEO and President Greg Coticchia, the Customer Care session offered attendees access to key LogicLibrary executives, who have been some of the foremost thought-leaders and innovators in the industry. Brent Carlson, recognized by *InfoWorld* as a "CTO to Watch" in 2004, teamed with Vice President of Product Management Alan Himler in a dynamic discussion of LogicLibrary's flagship product, Logidex, and described how customers are using the product as a platform for SOA governance. Additionally, the pair introduced the company's powerful code-scanning technology BugScan, and outlined how the integration of BugScan with Logidex gives developers and IT professionals the ability to identify, track, manage and secure their software assets across the software development lifecycle.

"LogicLibrary customers hail from all different industries and many are investing large amounts of time and money building, implementing and deploying SOA," said Coticchia. "We provide the tools to make successful, secure SOA a reality and have developed the Customer Care program as a way to increase communications with clients so that they may achieve their goals more quickly and cost-effectively. Based on the phenomenal response we received to our first event, you can expect to see more virtual user group sessions announced soon."

Logidex is the industry's premier solution for managing, reusing and governing software development assets in development and SOA projects. It features tight integration with all major development environments, including Eclipse, IBM Rational Application Developer, Rational Software Modeler and Rational Software Architect, Microsoft Visual Studio .NET and SAP NetWeaver Studio. Additionally, LogicLibrary's BugScan provides powerful, easy-to-use code-scanning technology that helps architects, developers and IT professionals ensure the highest levels of security throughout the software development lifecycle.

LogicLibrary's exceptional customer program offers tools and services such as Product Enhancement and Request for Support (PERFS), a Web site where customers can make suggestions on how to improve Logidex and/or ask support questions. PERFS was announced in early 2003 and was the first customer service portal to include a product enhancement request facility; approximately 30-40% of each product release is driven by customers' PERFS. The PERFS site is accessible via the Logidex Service Center, a support site for Logidex users. The Logidex Service Center ensures that LogicLibrary customers have the products and information necessary to derive the greatest value from their software development and SOA projects by providing access to the latest upgrades and supporting tools, as well as installation documentation. It can be accessed online at <http://support.logiclibrary.com>.

About LogicLibrary

LogicLibrary is a leading provider of software and services that make it possible for enterprises to manage and reuse software development assets (SDAs). The company's patent-pending technology provides a comprehensive and collaborative approach for creating, migrating and integrating enterprise applications for use in service-oriented architecture, Web services and other software development initiatives. Additionally, LogicLibrary's BugScan provides powerful, easy-to-use code-scanning technology that helps architects, developers and IT professionals ensure the highest levels of security throughout the software development lifecycle.

LogicLibrary has been positioned in the "Leader" quadrant in Gartner, Inc.'s Magic Quadrant for Metadata Repositories, 2004* and maintains strategic partnerships with Microsoft, as a Premier member of the Visual Studio Industry Partner (VSIP) program, IBM, as an Advanced PartnerWorld Partner, and Serena. LogicLibrary has been recognized the past two years on the *SD Times* 100 list of leaders and innovators in the software development industry and has integration partnerships that include Microsoft, IBM/Rational, Eclipse and Borland. LogicLibrary is headquartered in Pittsburgh, with additional offices in Rochester, MN and Sunnyvale, CA. For more information, visit <http://www.logiclibrary.com>.
