LOGICLIBRARY AND METALLECT ENTER STRATEGIC PARTNERSHIP

Market Leaders Extend Offerings to Help Companies Automate the Development and Maintenance of Enterprise Architectures that meet Corporate Governance and Compliance Objectives

PITTSBURGH—August 23, 2005—LogicLibrary®, the leading provider of software development asset management tools, and Metalect, the leading provider of software that reduces the costs, cycle-times and risks of maintaining enterprise applications, today announced a strategic partnership designed to enable customers to automate the development and ongoing management of enterprise architectures that meet corporate governance and compliance objectives. The partnership enables enterprises to expose, promote and manage software assets from within legacy applications to cut costs and reduce project risk while accelerating alignment with strategic business goals.

LogicLibrary's flagship product, Logidex, manages software development assets such as components, patterns and Web services, which use a variety of data elements. The Metalect IQ Server™ automatically catalogs functionality contained in applications to provide a consolidated view of all application and database logic, inter-dependencies, and development-based activities across the enterprise. IQ Server lends complimentary functions to Logidex's mapping, reporting and discovery engine capabilities, providing a more complete process for understanding and reusing current software assets.

“Many organizations lack visibility into the inner-workings of their existing applications and the software assets that they already have, impeding flexibility, consuming resources, and driving cost,” said Guy Hoffman, president and CEO of Metalect. “Enterprise Application Visibility provides organizations with actionable insights to promote sound enterprise architecture, governance and compliance at the application and database level to reduce cost, cycle-time and risk. Combining that with LogicLibrary's expertise in managing software development assets provides superior control and knowledge over applications, allowing them to be utilized to their maximum potential.”

“The combination of LogicLibrary's Logidex solution with Metalect's IQ Server offers tremendous value in supporting the discovery, management and governance of IT assets,” stated AgilePath President and CEO Eric Marks. “This compelling joint solution will facilitate rapid ROI from software asset reuse as well as provide a foundation for services reuse and design-time governance for SOA initiatives.”

“This partnership is an extension of LogicLibrary's long-standing motto, ‘Know what you have. Move ahead,’” said Greg Coticchia, CEO of LogicLibrary. “The combination of Metalect and LogicLibrary will give companies better insight into their applications and software development assets, allowing them to make more informed decisions about the state of their enterprise architecture. It will also support compliance efforts and streamline new initiatives, including those related to service-oriented architectures.”

About Metallect

Metallect provides a search-based solution to reduce the cost and complexity of application maintenance. Metallect's IQ Server™ software automatically catalogs functionality contained in existing applications, captures dependencies within and between applications, including legacy, open source, and packaged applications and their underlying databases, and provides actionable insights to management and project teams. With IQ Server companies are able to reduce costs, cycle-times, and risks associated with maintaining, enhancing, modernizing, integrating, rationalizing, and outsourcing applications by up to 30%. For more information, please visit <http://www.metallect.com>.

About LogicLibrary

LogicLibrary is the leading provider of software and services that make it possible for enterprises to manage and reuse SDAs. The company's patent-pending technology provides a comprehensive and collaborative approach for creating, migrating and integrating enterprise applications for use in service-oriented architecture, Web services and other software development initiatives. Additionally, LogicLibrary's Logiscan provides powerful, easy-to-use code-scanning technology that helps architects, developers and security professionals ensure the highest levels of security throughout the software development lifecycle.

LogicLibrary has been positioned in the "Leader" quadrant in Gartner Inc.'s 2H05 to 1H06 Magic Quadrant for Metadata Repositories* and maintains strategic partnerships with Microsoft, as a Premier member of the Visual Studio Industry Partner (VSIP) program, IBM, as an Advanced PartnerWorld Partner, and Serena. LogicLibrary has been recognized the past three years on the *SD Times* 100 list of leaders and innovators in the software development industry and has integration partnerships that include Microsoft, IBM, Eclipse and Borland. LogicLibrary is headquartered in Pittsburgh, with additional offices in Rochester, MN and Sunnyvale, CA. For more information, visit <http://www.logiclibrary.com>.
