LOGICLIBRARY EMBRACES MONO PLATFORM

PITTSBURGH—September 8, 2005—LogicLibrary®, the leading provider of software development asset (SDA) management tools, today announced that Logiscan has been ported to Mono, the Novell-sponsored open source development platform based on the Microsoft .NET framework. Mono allows developers to build Linux and cross-platform applications with improved developer productivity. Using a modified version of Novell's latest high-quality package of the Linux kernel, Logiscan can analyze binary code and direct users to the location of any vulnerability within the source code.

“As the unique features of Linux are exposed to the managed world, Mono will become a core feature of many applications,” said Miguel de Icaza, vice president of developer platforms at Novell. “The Mono project has sparked a lot of interest in developing C#-based components, libraries and frameworks—and it's critical that programmers be able to manage and secure their software development assets.”

Logiscan is an important part of LogicLibrary's governance platform for service-oriented architectures (SOAs), which enables IT organizations to manage, secure and reuse their software development assets. Validating the security posture of proprietary and third-party software before deployment reduces an organization's exposure to software vulnerabilities and produces software that can be reused often to support changing business needs, resulting in higher customer satisfaction and lower costs.

“With its active and enthusiastic contributing community, Mono will soon be the leading choice for development of Linux applications,” said Alan Himler, vice president of marketing and product development for LogicLibrary. “Novell's reputation for performance, security and quality were a perfect fit for LogicLibrary. By making it possible for developers to effectively combine security analysis with other aspects of application creation and management, LogicLibrary gives Mono developers the opportunity to make security a priority at the onset of their projects.”

About LogicLibrary

LogicLibrary is the leading provider of software and services that make it possible for enterprises to manage and reuse SDAs. The company's patent-pending technology provides a comprehensive and collaborative approach for creating, migrating and integrating enterprise applications for use in service-oriented architecture, Web services and other software development initiatives. Additionally, LogicLibrary's Logiscan provides powerful, easy-to-use code-scanning technology that helps architects, developers and security professionals ensure the highest levels of security throughout the software development lifecycle.

LogicLibrary has been positioned in the “Leader” quadrant in Gartner Inc.'s 2H05 to 1H06 Magic Quadrant for Metadata Repositories* and maintains strategic partnerships with Microsoft, as a Premier member of the Visual Studio Industry Partner (VSIP) program, IBM, as an Advanced PartnerWorld Partner, and Serena. LogicLibrary has been recognized the past three years on the *SD Times* 100 list of leaders and innovators in the software development industry and has integration partnerships that include Microsoft, IBM, Eclipse and Borland. LogicLibrary is headquartered in Pittsburgh, with

additional offices in Rochester, MN and Sunnyvale, CA. For more information, visit <http://www.logiclibrary.com>.
