LOGICLIBRARY'S LOGIDEX BECOMES ONE OF THE FIRST PRODUCTS VALIDATED "READY FOR IBM RATIONAL SOFTWARE"

*Industry-Leading Software Development Asset Management Solution Integrates with
IBM Software Development Platform*

PITTSBURGH—January 25, 2005—LogicLibrary®, the leading provider of software development asset management tools, today announced that the company's Logidex Plug-in has received IBM's "Ready for IBM Rational software" offering validation.

This validation demonstrates that the Logidex Plug-in integrates seamlessly with key products in the IBM Software Development Platform, including IBM Rational Application Developer for WebSphere Software, IBM Rational Software Architect and IBM Rational Software Modeler. The IBM Software Development Platform is a complete and open solution for developing software and software-based systems. It allows organizations to operate more efficiently and deliver innovative products and services that set them apart from their competitors.

"The 'Ready for IBM Rational software' offering helps business partners extend the IBM Software Development Platform with solutions that meet the specific needs of customers," said Claudia Dent, vice president of product management, IBM Rational. "We are pleased that LogicLibrary has joined the growing ecosystem of partners who have had their solutions validated as 'Ready for IBM Rational software.' The combination of Logidex and the IBM Software Development Platform will help customers better manage their organization's software assets, which enables them to accelerate software development to drive business value."

Logidex is a premier collaborative software development asset (SDA) management solution for development, integration and service-oriented architecture (SOA) projects. It features tight integrations with the industry's leading development environments, including IBM WebSphere Studio, IBM Rational XDE and Eclipse. Logidex has proven its ability to meet Eclipse requirements for installation and attribution, support of the Eclipse team environment, user interfaces and use of other Eclipse Application Programmer Interfaces (APIs).

"As developers build and deploy SOAs to meet their integration goals, SOA governance and the ability to identify, track and manage software assets across the software development lifecycle are increasing in importance," said Brent Carlson, vice president of technology and co-founder of

LogicLibrary. “Logidex provides a solution for SOA governance, and being ‘Ready for IBM Rational software’ will allow developers in the IBM software community to better control and manage their organization’s software assets, leading to streamlined projects, cost benefits and improved productivity.”

Earlier this year, Logidex was also validated as “Ready for IBM WebSphere Studio.” The Logidex Plug-ins for IBM’s solutions can be accessed through the “Ready for IBM Rational software” Plug-in Central at <http://www-106.ibm.com/developerworks/websphere/downloads/plugin/index.html>. For more information on this validation, visit <http://www.logiclibrary.com/rfwspr.htm>.

Logidex

Logidex is a collaborative software development asset (SDA) management solution that simplifies the creation, migration and integration of enterprise applications. It represents inherently complex, enterprise application environments in a graphical, intuitive way. Logidex is the only SDA management solution that offers federated library support, model-based searching, out-of-the-box assets, measurements and metrics.

About LogicLibrary

LogicLibrary is a leading provider of software and services that make it possible for enterprises to manage and reuse software development assets (SDAs). The company's patent-pending technology provides a comprehensive and collaborative approach for creating, migrating and integrating enterprise applications for use in service-oriented architecture, Web services and other software development initiatives. Additionally, LogicLibrary’s BugScan provides powerful, easy-to-use application-scanning technology that helps architects and developers ensure the highest levels of security at the onset of the design and development process.

LogicLibrary has been positioned in the “Leader” quadrant in Gartner Inc.’s Magic Quadrant for Metadata Repositories, 2004 and maintains strategic partnerships with Microsoft, as a Premier member of the Visual Studio Industry Partner (VSIP) program, IBM, as an Advanced PartnerWorld Partner, and Serena. LogicLibrary has been recognized the past two years on the *SD Times* 100 list of leaders and innovators in the software development industry and has integration partnerships that include Microsoft, IBM/Rational, Eclipse and Borland. LogicLibrary is headquartered in Pittsburgh, with additional offices in Rochester, MN and Sunnyvale, CA. For more information, visit www.logiclibrary.com.
