LOGICLIBRARY INTRODUCES ADD-IN FOR MICROSOFT VISUAL STUDIO 2005 TEAM FOUNDATION VERSION CONTROL

*SOA Governance Leader Helps Improve Team Collaboration and Quality Control from
the Convenience of the Visual Studio Environment*

PITTSBURGH—April 3, 2006—LogicLibrary®, the leader in design-time SOA governance and software reuse, today announced an add-in that enables customers to seamlessly access items in Microsoft's new Team Foundation Version Control as they use Logidex with the Visual Studio 2005 Team Foundation Server. Logidex's tight integration with Team Foundation Version Control enhances collaboration among Visual Studio 2005 users, resulting in higher productivity and improved quality control of important software development assets (SDAs).

Visual Studio 2005 Team Foundation Version Control maintains multiple versions of files, including a record of the changes to each file from version to version. It is a critical component in maintaining a high-level of quality control. The new Logidex add-in allows Visual Studio 2005 users, whether working together or in distributed locations, to quickly and easily capture Team Foundation Version Control-managed files, projects, and solutions from within their development environment.

"LogicLibrary shares Microsoft's belief that team collaboration is a prerequisite for application development success," said Alan Himler, vice president of product management and marketing at LogicLibrary. "The new Logidex add-in for Team Foundation Version Control facilitates team coordination and significantly helps developers and architects with cross-platform development projects—without ever leaving the Visual Studio 2005 Team System environment. This is the latest example of LogicLibrary's longstanding commitment to provide Microsoft developers and architects with convenient yet powerful tools to produce world-class software applications."

Logidex is a collaborative SDA management solution that simplifies the creation, integration, governance and security of enterprise applications throughout the complete application lifecycle. Its powerful mapping and discovery engine gives businesses and government organizations the ability to identify, manage and control the design, development and consumption of services throughout the distributed enterprise. Logidex is one of the only software asset management products to feature tight integration with the industry's leading development environments, including Visual Studio 2005.

About LogicLibrary

LogicLibrary is the leading provider of software and services that make it possible for enterprises to manage and reuse SDAs. The company's patent-pending technology provides a comprehensive and collaborative approach for creating, migrating and integrating enterprise applications for use in service-oriented architecture, Web services and other software development initiatives.

LogicLibrary has been positioned in the "Leader" quadrant in Gartner Inc.'s 2H05 to 1H06 Magic Quadrant for Metadata Repositories* and maintains strategic partnerships with Microsoft, as a Premier member of the Visual Studio Industry Partner (VSIP) program, IBM, as an Advanced PartnerWorld Partner, and Serena. LogicLibrary has been recognized the past three years on the SD Times 100 list of leaders and innovators in the software development industry and has integration partnerships that include Microsoft, IBM, Eclipse, BEA and Borland. LogicLibrary is headquartered in Pittsburgh, with an additional office in Rochester, MN. For more information, visit <http://www.logiclibrary.com>.
