## LOGICLIBRARY INTRODUCES ADD-IN FOR MICROSOFT VISUAL STUDIO 2005 TEAM FOUNDATION SERVER

*Tight Integration with Microsoft Application Platform Enables Organizations to Achieve Valuable Business Insight and Faster Results*

**PITTSBURGH—November 7, 2005**—LogicLibrary®, a leading provider of software development asset (SDA) management tools, today announced an add-in that allows users to launch Logidex directly from Microsoft Visual Studio 2005 Team Foundation Server. Logidex's tight integration with Visual Studio 2005 Team System will help developers and architects streamline projects, reduce costs and improve productivity by gaining better control over their organization's software development assets.

Visual Studio 2005 and the Microsoft .NET Framework 2.0 include features and technologies that support developers throughout the application lifecycle, from modeling through development, to deployment and updates. Visual Studio 2005 Team Foundation Server assists teams in managing sophisticated processes and comprehensive relational project metadata tracking. The Logidex add-in captures Visual Studio 2005 Team Foundation Server project or solution data as an SDA and allows Visual Studio 2005 Team Foundation Server to remain the system of record. In this way, a developer or architect can use Logidex to find and reuse a project or solution by importing it into the Visual Studio 2005 environment.

“Visual Studio 2005 continues Microsoft's long-standing commitment to delivering the most productive application development systems, ones that help customers improve speed to market and quality while decreasing development costs,” said Prashant Sridharan, group product manager in the .NET Developer Product Marketing Group at Microsoft Corp. “LogicLibrary's Logidex can help Visual Studio 2005 Team System users more efficiently build and deploy applications throughout the enterprise by providing value-added capabilities to identify, track and manage software development assets.”

Logidex is a collaborative SDA management solution that simplifies the creation, integration, governance and security of enterprise applications throughout the complete application lifecycle. Its powerful mapping and discovery engine gives businesses and government organizations the ability to identify, manage and control the design, development and consumption of services throughout the distributed enterprise. Logidex

is one of the only software asset management products to feature tight integration with the industry's leading development environments, including Visual Studio 2005.

“Visual Studio 2005 Team System represents a boon for software development teams. By integrating with Visual Studio 2005 Team System, Logidex provides users with the benefits of its advanced search, tracking and metrics mechanisms while retaining Team Foundation Server's issue tracking, build management and project management features,” said Alan Himler, vice president of product management and marketing at LogicLibrary. “The combination of Logidex and Visual Studio 2005 Team System will facilitate communication between members of the development team and reduce the complexity of the application development lifecycle.”

### **About LogicLibrary**

LogicLibrary is the leading provider of software and services that make it possible for enterprises to manage and reuse SDAs. The company's patent-pending technology provides a comprehensive and collaborative approach for creating, migrating and integrating enterprise applications for use in service-oriented architecture, Web services and other software development initiatives.

LogicLibrary has been positioned in the “Leader” quadrant in Gartner Inc.'s 2H05 to 1H06 Magic Quadrant for Metadata Repositories\* and maintains strategic partnerships with Microsoft, as a Premier member of the Visual Studio Industry Partner (VSIP) program, IBM, as an Advanced PartnerWorld Partner, and Serena. LogicLibrary has been recognized the past three years on the *SD Times* 100 list of leaders and innovators in the software development industry and has integration partnerships that include Microsoft, IBM, Eclipse and Borland. LogicLibrary is headquartered in Pittsburgh, with an additional office in Rochester, MN. For more information, visit <http://www.logiclibrary.com>.
